Transition

Lego

Lego started as a simple brick and now there are almost 9000 different pieces available.

All of the pieces are made of plastic and click onto other pieces in the exact same way as the original design.

There are now designers from all over the world creating new pieces and sets.

A man called Ole Kirk Christiansen started making connecting bricks in 1949.

Laid end to end, the number of LEGO bricks sold in a year would reach more than five times round the world.

Mae Jemison

When I was little, I lived with my mum, dad, sister and brother. My mum and dad always helped me to learn things and wanted me to do well.

I worked hard at school and college, then I went to medical school. I learnt how to be a doctor. After this, I worked as a travelling doctor helping people all around the world.

I applied to NASA to be part of their astronaut training programme, and they chose me for their space mission!

In September 1992, I went into space on board the Endeavour space shuttle. While I was in space, I carried out experiments about weightlessness. I loved looking out of the window at the stars..
